

ARCHANGEL LIBRARIAN SOFTWARE

ARCHANGEL LIBRARIAN enables Archangel collections to be easily displayed on screen in an accessible list format.

The packages in the collection can be searched and when the desired image is located, the package is opened at the image.

A system designed for the reading room, it can be imagined as a helpful archivist who has total knowledge of all of the documents in the search room who when asked will go to the correct volume and even open the page for the reader.

Multiple Librarians can be installed if your collections are separated and a short cut to each can be placed on the desk top for access

If your collections are organised in Archangel packages then the addition of The librarian program will enhance the readers access.
