ARCHANGEL software is a unique distribution tool for Libraries and Archives enabling the easy distribution of high resolution images on a re-sellable self-running CD or DVD. Each image can have a full, viewable description added, making it ideal for distribution to schools etc. and for making collections available inside or outside of the reading room.

The CD/DVD when run on any Windows PC system will produce on screen the collection in a thumbnail form. Simply browse to, or click on the thumbnail and a full resolution image is promptly shown. An image description or translation can be added and viewed alongside the image.

Although the readers can not alter the image in any way, they will have full access to the powerful viewing tools in ARCHANGEL such as the magnifying glass, image navigator and zoom facility. The creator of the CD/DVD can add a print facility if suitable and the thumbnail frame, initial introduction screen and title banner can all be customised to create a corporate identity for your discs.

**LATEST VERSION HAS**

- ◆ 360 DEGREE ANIMATION
- ◆ SLIDE SHOW
- ◆ SEARCHABLE DATA BASE
