

## REMOTE FOCUS CAMERA BODY

Designed by **Icam** to mount most models and formats of digital camera backs on to this stable camera body with a focusing system that can be operated from a separate control that can be placed near the capture computer. Making focusing on copy stands easy and accurate

Motorised lens enables capture systems that have integrated focus indication to operate without manual lens adjustment. Use of high resolution digital camera backs on high column copy stands becomes a much simpler process.

Interchangeable lens plates and camera back mounting. Gives this unique product the flexibility to fit in with most digital camera systems. If Icam do not have a standard fitting for your camera specification we will make every attempt to design a suitable solution.
