Separate Column.

Designed by Icam, this wall mounted, motorised column with an in to out motorised camera mount, provides the flexibility for Archives who are limited for space. This unit will take the heaviest camera heads and can be used as a digital or microfilm camera column. It can be made to any height to suit our clients requirements and is a simple sturdy easily serviced construction. As an addition to the column we have designed a range of roll in, roll out document bases. Including pneumatically controlled book handling and large format mapping tables. Also available is a motorised camera body for 5x4 or medium format camera bodies that allows remote focusing of the camera while mounted on to this column. Ideal for digital units that have focusing control built in to their software.

Roll in Roll out bases

Pictured is one of our base range. A modular system that allows flexibility of design and the ability to purchase for your immediate requirements knowing that if these needs change in the future They can be met by your ICAM designers.

ICAM OPTIONS

90 degree book loading cradle

The addition of a push in pull out shuttle. Has facilitated the handling of heavy bound volumes. Preventing operator injury when combined with our loading trolley. Books can now be taken straight from the repository and loaded on to the camera with the minimum of effort reducing the risk of book damage.

When used in conjunction with a digital camera head, this format book cradle provides support for volumes that will not open fully (not available for microfilm)

Book cradle options

Used with the SEPARATE COLUMN or ODIN systems, book cradles can be made to take any depth or page size .

The **Air Shuttle cradle**

Icam's air shuttle module has been developed to be used either as an addition to the pneumatic book handling system or as a stand alone system without the use of a top glass. The pneumatic shuttle moves very large documents for single page filming and is linked to the exposure system so that a single foot pedal press will take a frame then move the document into position for the next shot. Giving fast production and reducing repeating movements for the operator.

Flat base option.

The simplest format is a basic flat bed. Ideal for single page filming. Flat art work or maps. Height can be specified and other modules can be added as required.
